DETAILED ACTION

Drawings

1. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they do not include the following reference sign(s) mentioned in the description: *318 on page 7, line 13; 510 on page 9, line 9*. A proposed drawing correction or corrected drawings are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

2. The drawings are objected to as failing to comply with 37 CFR 1.84(p)(5) because they include the following reference sign(s) not mentioned in the description: *500 on Figure 5; 611 on Figure 6*. A proposed drawing correction, corrected drawings, or amendment to the specification to add the reference sign(s) in the description, are required in reply to the Office action to avoid abandonment of the application. The objection to the drawings will not be held in abeyance.

Specification

3. The disclosure is objected to because of the following informalities: On page 10, line 16, '605' should be change to -- 600 -- in order to be consistent with feature shown on Figure 6. Appropriate correction is required.

Claim Rejections - 35 USC § 102

The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

This application currently names joint inventors. In considering patentability of the claims under 35 U.S.C. 103(a), the examiner presumes that the subject matter of the various claims was commonly owned at the time any inventions covered therein were made absent any evidence to the contrary. Applicant is advised of the obligation under 37 CFR 1.56 to point out the inventor and invention dates of each claim that was not commonly owned at the time a later invention was made in order for the examiner to consider the applicability of 35 U.S.C. 103(c) and potential 35 U.S.C. 102(e), (f) or (g) prior art under 35 U.S.C. 103(a).

4. Claims 1, 3 are rejected under 35 U.S.C. 102(b) as being anticipated by Hung (5,886,923).

Regarding to claims 1, 3, Hung discloses a flash memory device comprising: a local row decoder (308) configured to drive word lines coupled to a sector of flash memory responsive to separate read and write control signals (A1, A2, CTLA, CTLB, Vps, Vns) provide thereto from outside the local row decoder circuit; a global row decoder circuit (302) coupled to the local row decoder circuit via the separate read and write control signal, and configured to activate the separate read and write control signals base on an address provided to the global row decoder circuit that indicates memory cells associated with the address are accessed using the word lines.

See Figs. 3-5; Cols. 6-11.

Allowable Subject Matter

5. Claims 2, 4-15 are objected to as being dependent upon a rejected base claim, but would be allowable if rewritten in independent form including all of the limitations of the base claim and any intervening claims.

The following is a statement of reasons for the indication of allowable subject matter:

The prior art of record fails to teach wherein the above noted flash memory support read-while-write capability that performing read operation in a first bank of the flash memory can be carried out simultaneous with a write operation in a second bank of the flash memory.

6. The following is an examiner's statement of reasons for allowance: Claims 16-28 are allowable over the prior art of record because none of the prior art whether taken singularly or in combination, especially when these limitations are considered within the specific combination claimed, to teach: a flash memory device comprising: local row decoders circuit, among others as claimed in independent claim 16, in respond to a separate write and read control signals, to enable read operation in a first sector in one of a plurality of banks and enables a write operation in a second in another of the plurality of the of banks simultaneous with the read operation.

Conclusion

7. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

- Kobayashi et al. (5,898,606) disclose an electrically programmable and erasable nonvolatile semiconductor memory device global and local decoder.
